

Forward Deployed Engineer Technical Exercise

Introduction

This exercise is designed to assess your ability to work with Sayari's API, integrate external data sources, and be creative. You'll be provided with API credentials and access to our documentation, including links to our SDKs. You're welcome to use any tools or libraries you prefer.

The core objective of this exercise is to simulate a real-world scenario you might encounter as a Forward Deployed Engineer at Sayari. Consider this task as a Proof of Concept (PoC) engagement with a potential client. Your goal is to take an idea and transform it into a tangible deliverable that clearly demonstrates the value of Sayari's data and capabilities to the client.

As you approach this exercise, ask yourself:

- How can I leverage Sayari's data to address a specific client need or challenge?
- What insights can I uncover that would be difficult or impossible to achieve without Sayari?
- How can I present my findings in a way that resonates with both technical and non-technical stakeholders?
- How can I present my findings in a way that results in an Aha moment for the client?

Your solution should not only showcase your technical skills by aligning with the technologies in the job description but also your ability to translate complex data into business value. Think about how you would present this solution to a client, highlighting the potential impact on their operations, decision-making processes, or risk management strategies.

Setup

1. API Credentials: will be shared via email
2. Documentation: <https://documentation.sayari.com/home/home/overview>
3. SDKs: <https://documentation.sayari.com/api/api-clients/overview>
 - a. Currently available: Python, Go, Node
4. List of Entities: attached
 - a. Three lists provided, pick and choose or create your own.

Exercise

Choose one of the following scenarios to complete. Feel free to be creative and adapt the exercise as you see fit

Scenario 1: Entity Profile Enrichment with External Source

With the provided list of entities, or your own. Your task is to:

1. Retrieve the profiles of these entities from Sayari.
2. Enrich the profiles with additional data from an external source.

Examples for inspiration

- Average temperature of entities
- Distance between entities and sayari's HQ

Scenario 2: Analytics Report

With the provided list of entities, or your own. Your task is to create an analytics report summarizing macro-level insights about these entities. Your task is to:

1. Retrieve the profiles of these entities from Sayari
2. Summarize and provide macro-level insights regarding the entities

Examples for inspiration

- Country breakdown of the entities
- Risk assessment breakdown
- Relationship network analysis

Deliverables

1. Source code for your solution
2. A brief report (1-2 pages) explaining:
 - Your approach to the chosen scenario
 - Any assumptions made
 - Challenges encountered and how you addressed them
 - How your solution demonstrates the value of Sayari data to a potential client

Success Criteria

- Correct use of the Sayari API to retrieve entity data
- Code quality: readability, simplicity
- Clarity and conciseness of your report
- This task has the potential to be very big, we understand that and want to be respectful of your time. If you are short on time, rather than leave features out, please document what you had in mind and how you might accomplish that goal given more time.

Submission

Please submit your solution via email with the appropriate links and reference.

Good luck! We look forward to reviewing your submission, and reach out if you have any questions.
